Providing our customers a useful data tool  
WellTrack® (Quinn Pumps Well & Pump Database)

### History:

WellTrack® was developed in-house to track the history of our customers reciprocating pumps from well to well and repair to repair. Every bottom hole pump serviced by Quinn's accumulates a history that is useful to identify problems and trends for our internal purposes.

### NOW AVAILABLE TO OUR CUSTOMERS

Customers can now view their own inquiries that will identify trends in their operations. Data including: condition at time of repair, lease/field location, cost of repair, wear, failure reason & cause, foreign material, etc. can be viewed at any time.

### Why use this software?

- The information can be used by your staff to make general field or specific lease inquiries.
- It creates a way for the customer to monitor how their pumps are performing on a regular basis.

### How does it work?

- Pump repair and wellsite information are entered into WellTrack® daily by our pumpshops.
- The customer installs Citrix® client software and accesses their WellTrack® data over the internet through a Citrix® login account.
- The customer is issued a login user name and password.
- Customer WellTrack data is current at all times.

### Features

- Well site inquiry
- View pump sheets and pump sheet details
- Pump history - including run-life
- Well site history - including run-life
- Failure reasons
- Part history
- Pump contents
